1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

2. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

3. Claims 2-7 are objected to because of the following informalities

Claims 2-6 are incorrect since in line 3 of claim 2 and line 4 of claim 3 the control and pulse signals are mixed up. The pulse signal PWM not the control signal Pow_en is clearly disclosed and shown as being a PWM signal. The base of amplifier transistor 311 is clearly disclosed and shown as being applied with the pulse signal PWM not the control signal Pow_en.

Claim 7 is incorrect since in line 11 makes no sense in light of the disclosed and shown invention. The fourth resistor 414 is clearly disclosed and shown as being connected between the collector of the second transistor 412 and the base of the first transistor 421 NOT connected between the collector and the base of the second transistor.

Appropriate correction is required.

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Art Unit: 2838

5. Claim 11 is rejected under 35 U.S.C. 102(e) as being anticipated by Charych (US 6,760,238).

Charych discloses a high voltage generator comprising an amplifier (20) amplifying a signal, a comparator (16) comparing the amplified signal and a fed-back voltage from the output of the high voltage generator, a voltage booster (Q1/T1+) boosting an input voltage based on the output of the comparator, and a rectifier (CR1/CR2/L1/C1) rectifying the boosted voltage as broadly recited.

6. Claims 2-7 would be allowable if rewritten to overcome the objections set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

7. Claims 1 and 8-10 are allowed.

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Santelmann (US 4,616,300), Hamp et al (US 4,888,821), Kosugi (US 5,568,343), and Balakrishnan et al (US 6,147,883 and 6,304,462).
